

## Chapter 10

- 10.1 My login shell is C shell. The process for the login shell is listed as -csh.
- 10.2 I used the `ps -al` command. Identify the process and parent process IDs by looking at the PID and PPID fields, respectively.
- 10.3 No solution needed.
- 10.4 No solution needed.
- 10.5 No solution needed.
- 10.6 The `who` and `date` commands is the first group run sequentially. The `cat temp` command and `uname` and `whoami` (in parallel) runs sequentially. The two command groups given in the command run in parallel.
- 10.7 `kill -9 10974 %3`
- 10.8 No solution needed.
